

EIA Energy Efficiency and Electrical Services

Energy Efficiency: Being part of Con Edison's Green Team, our responsibility is to Reduce Corporate Customers' Recurring Energy Bills. We analyze and retrofit customers' lighting with more energy efficient and better lighting thus accomplishing the reduction of their monthly electric bill plus the additional benefit, providing better lighting.

Monthly Electric Bill Before LEDs vs. After LEDs

The Public Service Commission in conjunction with Con Edison pay for most of the retrofits allowing customers absolute minimal investments that are normally recouped in about a half a year from the energy bill reductions. After this short period all the savings going forward are realized by the customer. EIA truly believes that this program is a wonderful value proposition for our corporate customers.

Electrical Services: As having New York City, Long Island and Westchester electrical licenses, we provide our corporate customers standard electrical services, from simple additions to complete computer rooms and office environment electrical services. Our customers can be assured that all of our Electrical Services adhere to applicable building codes & permit requirements.
